EIP-AGRI Common format for interactive innovation projects

The interactive innovation approach under the European Innovation Partnership Agricultural Productivity and Sustainability (EIP-AGRI)^[1] fosters the development of demand-driven innovation, turning creative new ideas into practical applications thanks to interactions between partners, the sharing of knowledge and effective intermediation and dissemination.

The EIP **common format** consists of a set of basic elements characterising the project and **includes one (or more) "practice abstract"(s)**. The format was developed with two main objectives:

- (1) to enable contacting partners and incentivise efficient knowledge exchange, and
- (2) to disseminate the results of the project in a concise and easy understandable way to practitioners.

The common format allows providing information all along the life-cycle of the project. The **content of the common format can be updated at any moment** when useful, for instance in an intermediate phase of the project. Project information should at least be available at the beginning (describing the situation at the start of the project, including project title and objectives) and at the end of the project (describing the results/recommendations resulting from the project, including a final project report and one or more practice abstracts).

The **common format** consists in obligatory, recommended and optional elements. Its fields are listed in the bullets below.

1) Obligatory elements

- **Title** of the project in native language: short and easily understandable (one key sentence on the project; max 150 characters, word count – no spaces)
- **Title** of the project in English: short and easily understandable (one key sentence on the project; max 150 characters, word count – no spaces)
- **Editor** of the text: person/organisation responsible for delivering the text
- **Project coordinator** (lead-partner) according to the cooperation/consortium agreement: name, address, e-mail, telephone
- **Project partners**: name, address, e-mail, telephone, type of partner (farm holder, advisor, research institute, SME, NGO, or other)

A cosa serve il Common Format?

Practice abstract del G.O. MIPROLED

Short summary for practitioners in native language on the (final or expected) outcomes (1000-1500 characters, word count – no spaces).

This summary should at least contain the following information:

- Main **results/outcomes** of the activity (expected or final)
- The **main practical recommendation(s)**: what would be the main added value/benefit/opportunities to the end-user if the generated knowledge is implemented? How can the practitioner make use of the results?

This summary should be as interesting as possible for farmers/end-users, using a direct and easy understandable language and pointing out entrepreneurial elements which are particularly relevant for practitioners (e.g. related to cost, productivity etc). Research oriented aspects which do not help the understanding of the practice itself should be avoided.

Nel contesto della pianura padana le condizioni luminose durante l'inverno sono particolarmente scarse non solo per le poche ore di luce giornaliere ma anche per la ridotta intensità luminosa dovuta a nubi, nebbia, foschia ecc.. Questo costituisce un forte limite nella produzione anche di quelle aziende che sono strutturalmente predisposte alla coltivazione durante tutto l'anno (serra ferro-vetro, riscaldamento con tubi radianti e/o a pavimento) che spesso interrompono la produzione nei mesi invernali o si vedono comunque penalizzata la produzione dal punto di vista qualitativo (es. scarsa fioritura, inadeguata conformazione della pianta).

Il recente sviluppo della tecnologia LED rappresenta un'opportunità da cogliere da parte della serricoltura contemporanea. L'adozione di tale tecnologia non rappresenta solo una valida alternativa, dal punto di vista dell'efficienza energetica, alle lampade attualmente usate (le HPS) ma costituisce uno strumento nuovo anche per la possibilità di modulare lo spettro in modo tale da perseguire fini più complessi e/o specifici che vanno dall'aumento dell'efficienza fotosintetica al controllo di parametri morfologici della pianta.

Il progetto intende quindi affinare le conoscenze tecniche e scientifiche delle luci LED coinvolgendo direttamente le aziende per renderle consapevoli dei vantaggi e acquisirne familiarità nell'uso.

DIVINE - Difesa dalla degenerazione infettiva della Vite e dai Nematodi: cooperazione per migliorare la competitività delle aree ad alta vocazione viticola

Geographical location	Italy
Main geographical location (NUTS3)	Treviso
Other geographical location (NUTS3)	Verona
Keywords	Farming practice Pest / disease control
Main funding source	Rural development 2014-2020 for Operational Groups (in the sense of Art 58 of Reg.1305/2013)
Project type	Operational group
Starting date	2018
End date	2022
Project status	ongoing
Website	CECAT

Title (in English):
DIVINE - Control of grapevine fanleaf and nematodes: cooperation to improve competitiveness of highly traditional areas

Objective of the project (native language):
L'obiettivo principale del PAGO è scoprire soluzioni volte a migliorare la qualità e la quantità di produzione di uva e vino nei vigneti infestati da degradazione infettiva della vite e nematodi, trasformando la conoscenza in valore economico.
Gli obiettivi specifici sono: scoprire prodotti in grado di ridurre i nematodi e migliorare la salute delle piante in condizioni sperimentali, valutare l'efficacia dei trattamenti sul campo nel miglioramento delle produzioni vinicole, valutare i vantaggi economici, divulgare conoscenze e risultati alle parti interessate, educati i produttori per controllare la degradazione infettiva della vite e nematodi

Objective of the project (in English):
The main objective of the PAGO is to find out solutions aimed to improve quality and quantity of grape and wine production in vineyards infected by fanleaf and nematodes, transforming knowledge in economic value.
The specific objectives are: find out products able to reduce nematodes and improve plant health in experimental conditions, evaluate the effectiveness of field treatments in improving vine productions, assess the economic advantages, disseminate knowledge and results to stakeholders, educated grapegrowers to control fanleaf and nematodes.

Description of activities (native language):
Il PAGO è organizzato in sette pacchetti di lavoro (WP), come segue:
- WP1: gestione e coordinamento del progetto
- WP2: studi preliminari e monitoraggio dei parassiti (malattie e nematodi)
- WP3: prove sperimentali in condizioni controllate, per la valutazione dell'agente di controllo biologico e del prodotto
- WP4: prove sperimentali in vigna con valutazione dell'efficacia dei prodotti testati nel miglioramento della qualità e della quantità delle produzioni di vite
- WP5: analisi economiche a livello di azienda agricola

GRAZIE DELL'ATTENZIONE
